TradingAgents Overview

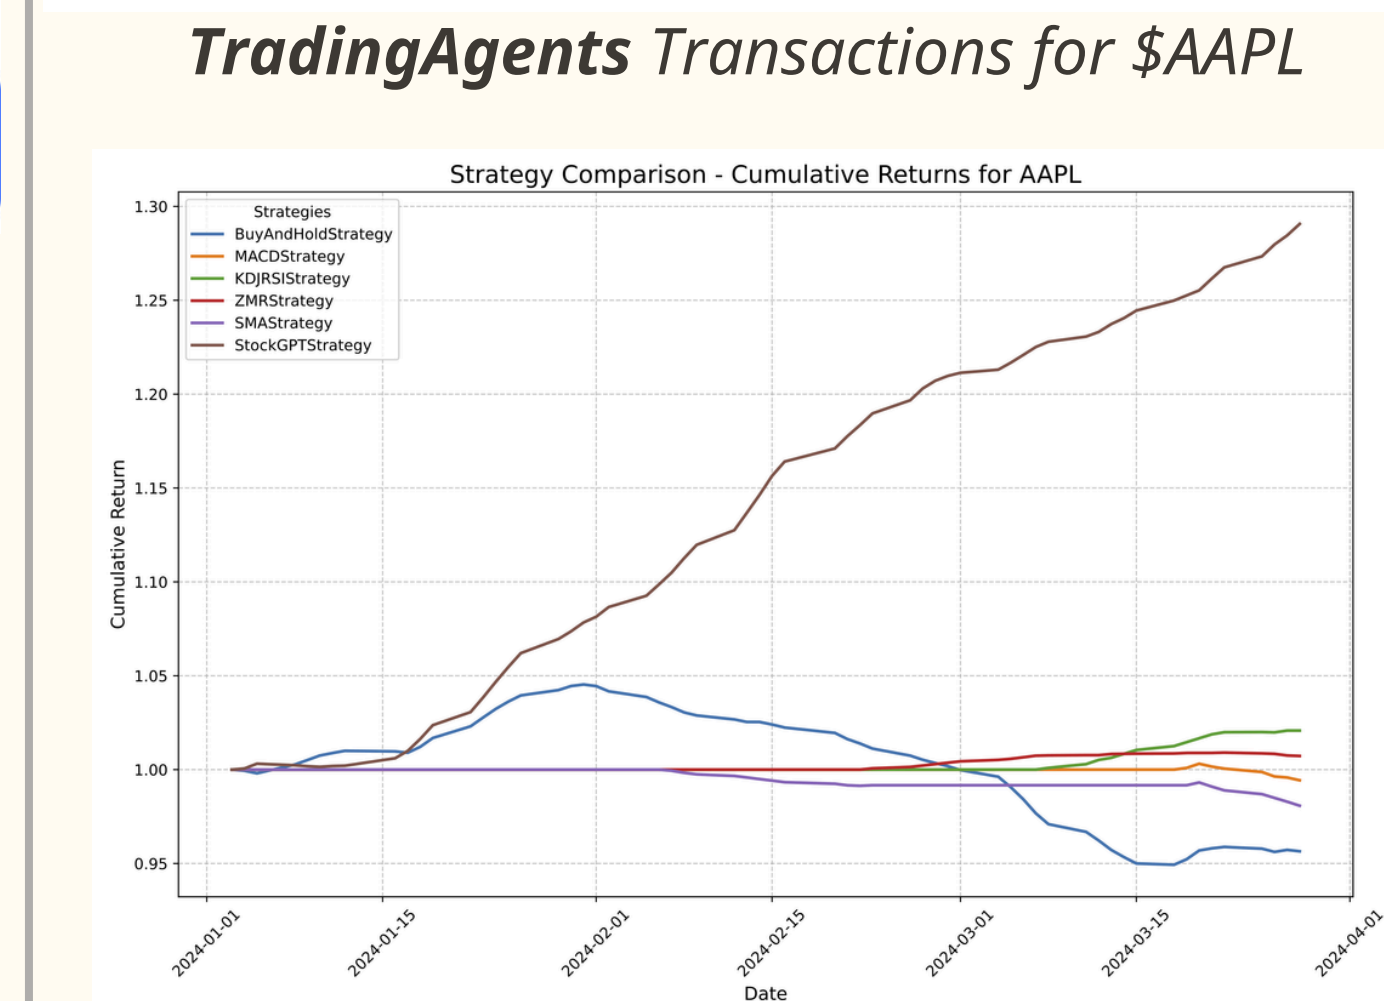

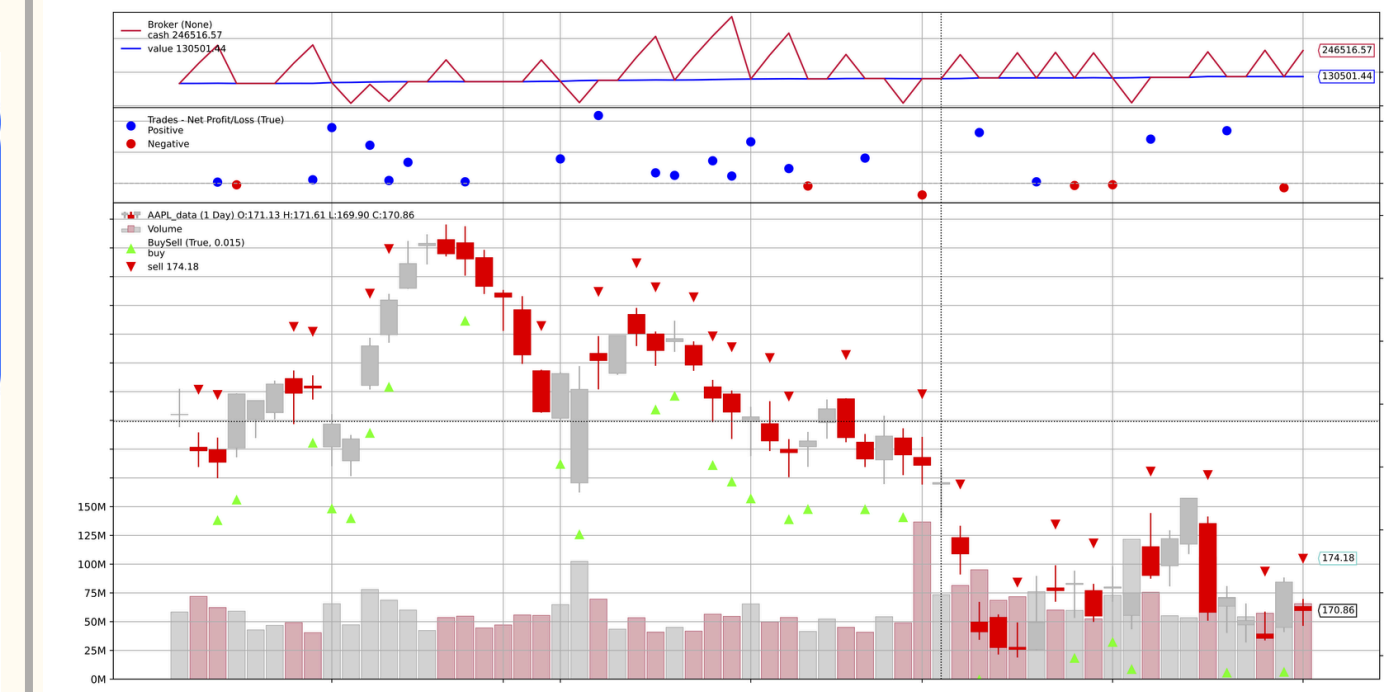

- Novel trading framework **TradingAgents** inspired by real-world trading firms.
- LLM-powered agents in **specialized roles** for financial information preprocessing
- Bull & Bear **researchers** assess market conditions, traders synthesize insights.
- The team of **risk management** ensures controlled exposure.
- Improves trading performance via dynamic collaboration.

Key Features

- Structured multi-agent workflow for decision-making.
- Hybrid communication: structured outputs + natural language debates.
- Diverse agent roles (analysts, researchers, traders, risk managers).

Analysts Team	Four analysts concurrently gather relevant market information.
Research Team	The team discusses and evaluates the collected data.
Trader	Based on the researchers' analysis, the trader makes the trading decision.
Risk Management Team	The team assesses the decision against market conditions to mitigate risks.
Fund Manager	The fund manager approves and executes the trade.

TradingAgents Cumulative Returns

I. Analyst Team
